

jLAN Technologies Announces the availability of jLAN Mobile Payments, real-time mobile credit card processing

Hollywood, Florida August 1st, 2009. jLAN Technologies, a leading Microsoft Gold

Certified partner in mobility solutions, today announced the release of the jLAN Mobile Payments mobile credit card processing module. jLAN Mobile Payments is fully integrated to VeriFone's **IPCharge** web-based payment gateway.

"jLAN Technologies wanted to provide a PCI-compliant, real-time card payment solution on our mobile platform, and we chose **IPCharge** because it is easy to integrate and it is developed by VeriFone, the leader in the electronic payments market," said jLAN Technologies, Inc.

President, Andres Link. "With the **IPCharge** integration our clients can now capture and validate credit card payments, in real time, directly from their mobile devices. This capability will lower our client's payment processing costs, reduce chargeback risk and most importantly save valuable time while on the road. "

IPCharge provides consolidated payment processing, settlement and reporting capabilities that enables jLAN Mobile to efficiently integrate payments with transactions captured on Windows Mobile Devices running the jLAN Mobile Sales software. Integration of **IPCharge** into the jLAN Mobile platform will make it easy for jLAN's customers to track payments, automate processing of those payments and reconcile cash receipts.

jLAN Mobile is used by companies in nine countries to connect mobile sales and route sales workers to back office ERP systems including Microsoft Dynamics GP and Microsoft Dynamics AX. jLAN's flagship product, jLAN Mobile Suite, runs on Windows Mobile devices and is designed for the sales and delivery workforce in variety of industries including food and

beverage distribution, consumer packaged goods, industrial parts distribution and direct store delivery operations.

About jLAN Technologies, Inc.
