

jLAN Technologies Announces Release of jLAN Mobile Tablet Edition

Tablets Allows Mobile Workers to Use a Wider Variety of Mobile Devices

Hollywood, Florida – August 1, 2011 – [jLAN Technologies](http://www.jlan.com), a leading developer of route accounting software and sales force automation software, has announced the addition of the jLAN Mobile Tablet to their growing product line.

The next step in the evolution of jLAN Mobile for Windows Mobile, the jLAN Mobile Tablet Edition, is an offline order entry system that uses jLAN's proven and reliable synchronization technologies to connect laptops to the back-end ERP system when a connection is available. It allows mobile sales representatives to capture sales transactions completely offline from the ERP when on the road. Developed to allow mobile workers to use devices with larger form factors like Windows-based laptops, netbooks or tablets, jLAN Mobile Tablet allows reps to see more data on a screen which streamlines the order entry process.

Initially targeted for the food service industry, jLAN Mobile Tablet Edition will be a tremendous advantage for food service distributors. Since food service orders must typically be delivered within 24 hours, jLAN Mobile Tablet will allow the sales representative to enter the order while on-site and instantly send it to the ERP, so it can be prepared as soon as the site visit is over. This will benefit food service distributors because they can now begin staging their delivery trucks much earlier in the day.

Speed of order entry is also another critical element while at the customer site because food service orders tend to be very long. With the jLAN Mobile Tablet, the sales representative will be able to quickly view critical sales data such as item history, item prices, last price, last margin, last quantity and approved product lists.

jLAN Mobile will now give customers more choices and will no longer be limited to smaller mobile devices. The jLAN Mobile Tablet can be used with any larger form factor mobile device including a laptop, netbook or tablet running on the Windows operating system.

About jLAN Technologies, Inc.
